Profile

Engineering student at ENSTA Paris, majoring in Computer Science, currently pursuing the M2 MVA (Mathematics, Vision, Learning) master's degree at ENS Paris-Saclay. Passionate about AI and machine learning, I aim to contribute to innovative research and technical projects while developing my scientific skills.

Education

ENS Paris-Saclay — Paris Saclay, France
Master 2 MVA (Mathematics, Vision, Learning) — 2026 – 2027

National School of Advanced Techniques (ENSTA Paris) — Palaiseau, France
General Engineering Degree, Major in Computer Science — 2024 – 2027

National Engineering School of Tunis (ENIT) — Tunis, Tunisia
Engineering Degree in Advanced Techniques (Double Degree Program) — 2024 – 2027

Preparatory Institute for Engineering Studies of El Manar (IPEIEM) — Tunis, Tunisia
Preparatory Cycle, ranked 11/1750 in the national entrance exam (Maths-Physics). — 2022 – 2024

Work Experience

Research Intern (PRE) — Palaiseau, France
Inria Saclay – PETSCRAFT Project-Team — June – August 2026

- Research on **watermarking and membership-inference techniques** for auditing multimodal generative models (audio focus) **with statistical guarantees**, supervised by Nicolas Anciaux.
- Built a targeted **state of the art** on training-data auditing: audio generation models (diffusion, auto-regressive, neural codecs), content **watermarking**, and **Membership Inference Attacks (MIA)** / data-attribution methods.
- Explored **novel audio watermarking** methods combined with statistical audit to detect unauthorized use of training data with explicit false-positive guarantees.

Artificial Intelligence Intern — Newark, United States (remote)
Dione Protocol — June – August 2025

- Winner of the **IAOdyssey** hackathon with a project automating AI-generated content based on real-time trends.
- Built a full website with **authentication (login/signup)**, API integration, and AI post generation.
- Expanded the concept to **blockchain**, **NFTs**, and **memecoins**, generating dynamic videos from CoinMarketCap trends.
- Collaborated as a team on design, backend, and the integration of generative AI models.

Python, React, FastAPI, Web Scraping, LLM, CoinMarketCap API, Git/Github

Projects

CarbonSens – AI Platform for Environmental Monitoring (GAIAthon'25)

- **National and continental (Africa) winner** of **GAIAthon'25** with an intelligent environmental monitoring project.
- Web application combining **IoT, Copernicus satellite data** and **predictive AI** to monitor industrial emissions.

Python, Django, React, LoRaWAN, Copernicus API, Docker, LLMs

PixSee – Image Restoration Game (IN104 Project)

- Developed a **C video game** for guessing altered images progressively restored using corruption algorithms (noise, shift).
- Optimized interface with **SDL3** for performance (¡ 2s load, 30 FPS).

C, SDL3, SDL_ttf, stb_image, Dynamic data structures, Memory optimization, Event-driven programming

Vision OOP – Real-Time Video Filter Application (IN204 Project)

- Developed **C++ app** with OpenCV for real-time webcam filters using OOP (inheritance, polymorphism).
- Modular pipeline with seq/par/GPU modes, UI trackbars, split-view, benchmarking.

C++, OpenCV, OOP, Parallelism (threads, OpenCL), CMake, Git/Github

Text Classification: Sentiment Analysis on Tweets – Classical vs LLM Approaches (NLP Project)

- Comparative study on tweet sentiments using ML (TF-IDF, KNN/SVM/XGBoost), hybrid (BERT embeddings, SVM/MLP), LLM fine-tuning (BERT/RoBERTa, LoRA).

Python, scikit-learn, Transformers, BERT, RoBERTa, LoRA, Hugging Face, Git/Github

Skills

- **Programming Languages**: Python, C, C++.
- **Artificial Intelligence and Computer Vision**: PyTorch, OpenCV, LangChain, LangGraph.
- **Web Development and Frameworks**: FastAPI, Streamlit, React (basic).
- **Data and Analytics**: SQL, MongoDB, NumPy, Pandas, Matplotlib.
- **DevOps and Collaboration Tools**: Git, GitHub, Docker.

Languages

Arabic: Native **French**: Bilingual **English**: Bilingual **German**: A2
